Product name	Specification
Rotation speed setting method	<ul style="list-style-type: none"> ● Set up by external potentiometer ● Set up by external DC 0~5V
Acceleration time deceleration time	0.5~10 seconds : set at 2000 r/min when there is no load (it may change depending on the size of the load) Acceleration time and deceleration control equipment to control at the same time
Input signal	Internal full-up input method, external input voltage read as greater than 2v high(off) same at all input ports
Protection function	<p>If the following protection mode comes on, control unit alarm signal is shown. Motor stops automatically.</p> <ul style="list-style-type: none"> ● Overload protection mode : If torque that is greater than the rating is applied to the motor for more than 5 seconds ● Overvoltage protection : If voltage applied to the control unit goes over the upper bound of the rating allowance ● Open phase protection : If cable sensor line gets disconnected during motor operation ● Undervoltage protection : If voltage applied to the control unit is less than the lower bound of the rating voltage allowance ● Over speed protection : If motor rotation speed is faster than 2500 r/min
Motor insulation class	E TYPE(120°C)
Maximum extension distance	MOTOR - CONTROL UNIT 2m
Rated time	Continuous

* Like weight carried being downwards, X SERIES cannot control motor speed through weight.

Motor gets stopped automatically through overvoltage protection of load is being carried downwards or it is heavier than allowed load inertia.
